

# Data sharing platform

The Seer Data platform has brought 1400 datasets together on a community platform now in beta phase for use by Lighthouse and stakeholders. The platform built in partnership with Seer Data & Analytics and funded by Perpetual Trustees is now being adopted by place-based sites throughout Australia.

Lighthouse continues to play a critical role in providing feedback for the ongoing development of this platform. Providing an innovators lens and consumer's perspective on the needs and functionality of the data platform. With each iteration and evolution of the platform it becomes more user friendly and useful for the social innovation and community driven work of Lighthouse. The Seer Data and Analytics platform is now being taken up and utilised by communities around Australia.

Transforming systems.

Catalytic.

Shifting power.
